

## Sustainable Energy Project Developer

Job description ref: 201809

CLIMACT, a leading Energy & Climate Change consulting and project development company based in Louvain-la-Neuve – Belgium, is looking for potential candidates (M/F) to fill an open position for its project's development activities, starting as soon as possible.

### Role and responsibilities

The new position, within a team of seasoned consultants, includes the following responsibilities:

- Technical and financial quantification of energy efficiency and renewable energy projects
- Preparation of renewable energy projects proposals for industrial companies or public organizations
- Full ownership and management of industrial renewable energy projects, including planning, contractual agreements and full operations management
- Interaction with all stakeholders (customer, technology suppliers, legal parties, financial institutions...)
- Monitoring and management of our existing installations in operations (Solar PV, CHP)
- Business development initiatives

### Profile

Potential applicants should present the following experience and skills:

- Electrical or electromechanical Engineering (industrial/civil) degree with a strong interest in energy, or equivalent experience
- 3 years of relevant experience in engineering and/or project management position related to industrial energy projects
- Strong solution-oriented mindset with a sense of creativity and autonomy
- Strong empathy for customer relations management and teamwork capabilities
- Good understanding of corporate project financing
- Good communication skills (FR, NL & EN) – bilingual is a must

### Proposal

- We offer a full-time position with a competitive salary
- Mobility solutions are provided
- Telecommunication tools and flexible home teleworking available
- Head office based in Louvain-la-Neuve
- Customers are mainly located in Belgium.
